

John Tyrone Pagunsan Coronel

Senior Software Engineer | Python / Django Developer

jtcoronel.chmsu@gmail.com | Talisay, LSAB 310 | Male | 2 Years Experience

PROFESSIONAL SUMMARY

Senior Python and Django Developer with experience in developing backend systems for banking and financial institutions. Committed to solving problems collaboratively, following design patterns, and delivering scalable, robust, quality software. Experienced in architecture patterns, API integration, database design, unit tests, code reviews, automation, and writing documentation for all code produced. Adapts quickly to new technologies and platforms to write production-ready code.

CORE SKILLS

- Python / Django development -- backend systems and REST API integration
- Build robust and scalable software following design patterns and architecture patterns
- Integration of user-facing elements with server-side logic
- Building reusable code and libraries for future use
- Optimization of application performance, speed, and scalability
- Implementation of security and data protection solutions
- Design and implementation of data storage solutions
- Different types of API integration and Cross-team Collaboration
- Writing documentation for all codes produced and update/upgrade when applicable
- Writing unit tests, automation, and performing code reviews
- Database and API design -- participate and provide inputs or run tests when necessary
- Dive into difficult problems and deliver results on schedule
- Brainstorming sessions -- contribute ideas to technology, algorithms, and products
- Learn and adapt to new technologies and write production codes with it

WORK EXPERIENCE

Senior Python/Django Developer | BankTech Solutions | 2024 - Present

- Developing backend systems for banking mobile applications using Python and Django
- Build robust and scalable software following proper architecture patterns and smart code
- Integration of user-facing elements developed with server-side logic for 3 bank clients
- Building reusable code and libraries for future use across multiple financial institution projects
- Optimization of application for maximum speed and scalability under high banking load
- Implementation of security and data protection for sensitive financial data
- Design and implementation of data storage solutions for banking transaction systems
- Different types of API integration for payment gateways and financial institutions
- Cross-team Collaboration for developing the best solutions across 4 development teams
- Write documentation for all codes produced and update/upgrade them whenever applicable
- Participate in database and API design and provide inputs or run tests when necessary
- Help improve code quality through writing unit tests, automation and code reviews
- Contribute ideas to technology, algorithms, and products during brainstorming sessions
- Successfully deliver results on schedule even for difficult problems

Junior Django Developer | FinTech PH | 2023 - 2024

- Developing backend systems for mobile applications using Python and Django framework
- Building reusable code and libraries for future use in financial services platform

- Learned to adapt to new technologies and platforms and write production codes with it
- Participated in database and API design and provided inputs when necessary
- Participated in brainstorming sessions and contributed ideas to products and algorithms

EDUCATION

BS Computer Science | Central Philippine State University | 2019 - 2023

Thesis: Scalable Django Backend Architecture for Banking Mobile Applications

PROJECTS

Banking API Integration Platform (Django)

- Developed backend systems for different banks following proper architecture patterns
- Built robust and scalable software with reusable code and libraries for future use
- Implemented security and data protection and data storage solutions for financial data
- Different types of API integration for financial institutions -- collaborated cross-team

Mobile Banking Backend System

- Responsible for development, maintenance and deployment of banking mobile application
- Optimization of application for maximum speed and scalability under concurrent load
- Wrote documentation for all codes produced and updated them whenever applicable
- Wrote unit tests, automation scripts, and performed code reviews for quality products

CERTIFICATIONS

- Python Django Developer Certification (2023)
- Banking Software Architecture Certification (2024)
- Scalable API Design and Data Protection Certification (2024)
- Unit Testing and Code Review Best Practices (2024)
