

John Doe

Senior Software Engineer | Python / Django Developer

johndoe@email.com | Talisay, LSAB 310 | Male | 2 Years Experience

PROFESSIONAL SUMMARY

Senior Python and Django Developer experienced in developing backend systems for banking and financial institutions. Committed to solving problems collaboratively, following design patterns, and delivering scalable, robust, quality software. Skilled in architecture patterns, API integration, database design, unit tests, code reviews, automation, and writing documentation for all code produced. Quickly adapts to new technologies and platforms to write production-ready code and deliver results on schedule.

CORE SKILLS

- Python and Django -- developing backend systems for banking mobile applications
- Build robust and scalable software following design patterns and architecture patterns
- Integration of user-facing elements with server-side logic
- Building reusable code and libraries for future use
- Optimization of application for maximum speed and scalability
- Implementation of security and data protection
- Design and implementation of data storage solutions
- Different types of API integration and Cross-team Collaboration
- Write documentation of all codes produced and update/upgrade whenever applicable
- Writing unit tests, automation, and performing code reviews to improve code quality
- Participate in database and API design and provide inputs or run tests when necessary
- Learn and adapt to new technologies/platforms and write production codes with it
- Contribute ideas to technology, algorithms, and products in brainstorming sessions
- Dive into difficult problems and successfully deliver results on schedule

WORK EXPERIENCE

Senior Python/Django Developer | BankTech Solutions | 2024 - Present

- Responsible for development, maintenance and deployment of banking mobile applications
- Developing backend systems for different banks and financial institutions
- Build robust and scalable software following proper architecture patterns and smart code
- Integration of user-facing elements developed with server-side logic
- Building reusable code and libraries for future use across multiple projects
- Optimization of application for maximum speed and scalability
- Implementation of security and data protection for sensitive financial data
- Design and implementation of data storage solutions for banking systems
- Different types of API integration for payment gateways and financial institutions
- Cross-team Collaboration for developing the best solutions
- Write documentation of all codes produced and update/upgrade them whenever applicable
- Participate in database and API design and provide inputs or run tests when necessary
- Learn and adapt to new technologies/platforms when needed and write production codes
- Help improve code quality through writing unit tests, automation and code reviews
- Participate in brainstorming sessions and contribute ideas to technology and products
- Dive into difficult problems and successfully deliver results on schedule

Junior Django Developer | FinTech PH | 2023 - 2024

- Developing backend systems for mobile applications using Python and Django
- Building reusable code and libraries for future use in financial services
- Learned to adapt to new technologies/platforms and write production codes with it
- Participated in database and API design and provided inputs and run tests when necessary
- Contributed ideas to technology, algorithms, and products in brainstorming sessions

EDUCATION

BS Computer Science | Central Philippine State University | 2019 - 2023

Thesis: Scalable Django Backend Architecture for Banking Mobile Applications

PROJECTS

Banking API Integration Platform (Python/Django)

- Developing backend systems for different banks following proper architecture patterns
- Build robust and scalable software -- building reusable code and libraries for future use
- Implementation of security and data protection and data storage solutions
- Different types of API integration -- Cross-team Collaboration for best solutions
- Wrote documentation of all codes produced and updated/upgraded whenever applicable
- Helped improve code quality through writing unit tests, automation and code reviews

CERTIFICATIONS

- Python Django Developer Certification (2023)
- Banking Software Architecture and API Integration (2024)
- Unit Testing, Automation and Code Review Best Practices (2024)
